

Kids Go Boating – How locks work

Make the water in the lock the same level as the boat by opening paddles in the lower gates. It's like emptying a bath, take the plug out.

Once the water is the same level as the boat. Open the gates and close the paddles. Then take the boat into the lock and close the gates. Again just like you want to fill the bath so put the plug in before you turn the taps on.

Go to the top gate and open the paddle to let the water fill the lock. Again just like filling the bath but with a lock when the levels are the same the top gate will open and let the boat out, then close the paddles. So with a bath you turn the taps off.

So when you want to go down in a lock it's just the reverse.
